

Vision 2025 Public Comments

March 15, 2007

- Does preserving Ag. lands include requiring land owners to keep pasture land free of cedars and scrub trees? Housing developments need to be allowed closer to city limits and less the further away.
- I would like to see a moratorium placed on any development in the Zeandale Valley. If the goal is to protect prime agricultural land, a moratorium would be a good start. Re: Vision For Riley County bullets: the statement “conservation of natural resources is valued” such a statement means nothing! It doesn’t conserve anything. I get the feeling this 2025Vision debate is useless. According to the current existing goals it is stated within more than one “goal” that agricultural land should be preserved. I am not sure about other rural areas in Riley County but it is very apparent, that these goals are being completely ignored in the Zeandale Valley where building permits are issued right and left to developers.
